

FlexLine

**The solution to
managing your
liquid resources.**

**Built in the USA,
working around
the world.**

Introducing **FlexLine**. Preassembled, tested systems, trucked to your location and operating in days, instead of weeks.

Flexible and innovative.

Budgets are under pressure. Leadtimes are tight. Compliance is mandatory. J.Mark Systems responds with **FlexLine**, pre-engineered fixed-volume wastewater treatment systems. J.Mark has more than twenty years experience designing and installing successful wastewater treatment system installations throughout the Americas, and recognized the need for treatment systems that were ideal for all metal finishing applications.

Designed better.

Good design, like quality, is easy to recognize. **FlexLine** offers you the efficiency of a modular design with the flexibility to adapt to space and capacity needs.

Built better.

FlexLine systems are built in the United States from high-quality corrosion-resistant components. Systems are modular, portable and customizable. J.Mark is ISO 9001:2000 registered—you're working with a company you can trust. For more than twenty years, our systems have worked the way they're supposed to.

Monitored better.

FlexLine is designed from the ground up to provide operators user-friendly control and monitoring capability. Off-site monitoring capability is available from J.Mark Systems, utilizing an integrated modem connection. The system features real-time logs for record-keeping and compliance reporting.

FlexLine. Pre-engineered to your specifications, assembled, and tested, then disassembled, carefully packaged, and shipped to your location.

Shipped anywhere.

FlexLine is packaged securely for land, air, or sea shipment throughout the world. Each system is factory preassembled and tested prior to shipment.

Installed faster.

The preassembled modular design concept allows simple, efficient, cost-effective field installation, completed within days instead of weeks.

Trained better.

The FlexLine System is designed for ease of operation and incorporates the tools necessary to manage compliance demands. Your employees receive on-site training to qualify them for system operation.
